

(BS) EN 1058: 2009 (confirmed 2014)

Wood-based panels - Determination of characteristic 5 percentile values and characteristic mean values

This standard gives methods for calculating characteristic values following the determination of mechanical properties under EN 789. The values calculated are the 5 percentile values and the characteristic mean values. Along with EN 789, these are referenced in the harmonised European standard EN 13986 for wood-based panel products.
